Issue Number 1

Date: Tuesday, August 16, 2005

“Let’s make a better world for our grandchildren.” That’s the idea behind the formation of our company - AmpMobile Conversions LLC.

AmpMobile Conversions was not started as our primary source of income. We decided to incorporate to become a research and development company, to make a difference in the world, to improve today’s technology and make a better product. *“We’re out to build a better mousetrap.”*

Our primary projects at this time are in the transportation field . We can convert gasoline powered vehicles into totally electric vehicles - not into hybrids, which still require gasoline. We would love to see everyone in Lake Wylie and surrounding area driving electric vehicles. We feel it won’t be long before York county will require air quality testing, like Mecklenburg county does now. And with gas prices only going up, we want everyone to know there is an alternative.

Of course an electric vehicle will *not* meet everyone’s needs, simply because of the current technology, but they could help a lot of people and certainly would help the environment. Each vehicle is designed for the individual’s driving needs (and wants).

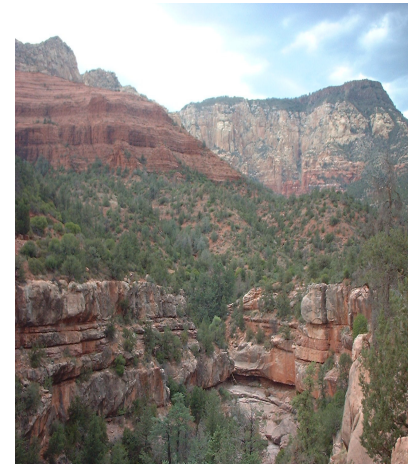

When the battery technology catches up with the electronics technology, everyone could be in an electric vehicle. Just think, no more dependence on foreign oil. And the batteries could be charged by alternative sources, not just plugged into your home’s electricity.

We would also like to foster that alternative energy usage and guide people to the proper equipment and use of such items. Examples being photovoltaic panels (solar panels), wind generators, solar water heaters and home heating systems, passive solar heating and cooling and more. It seems there are so many people out there willing to put greed ahead of progress. They are so eager to make a quick buck at another’s expense. A great example was the solar boom in the 70’s. Instead of showing people how solar worked and what they actually needed they just sold equipment to make themselves money. Then there was no guidance to make the equipment work properly. So a lot of people felt solar didn’t work and was a waste of money. Our goal is to help people to do it right and have something that works, and works efficiently.

We also hope that the information we provide can help teach our children and grand-

children more about the environment and where it is headed. This includes all children, not just those in our immediate family. By making simple life changes we can help the earth to be around for future generations to enjoy it.

As a final note, though people have been converting vehicles to electric for years they have been using old technology. We hope to improve on that technology.
